ROCCIA **EXAMINER** WOODCOCK WASHBURN KURTZ TAYLOR, BARRY W MACKIEWICZ & NORRIS LLP One Liberty Place - 46th Floor ART UNIT PAPER NUMBER Philadelphia, PA 19103

2643
DATE MAILED: 08/22/2002

Please find below and/or attached an Office communication concerning this application or proceeding.

		Application No.	Applicant(s)
Office Action Summary		09/752,600	ZELLNER ET AL.
		Examiner	Art Unit
			2643
The MAILING DATE of this communication appears on the cover sheet with the correspondence address			
Period for Reply			
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).  - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).  Status			
1) 🗌	Responsive to communication(s) filed on	_,	
2a) <u></u> □	This action is <b>FINAL</b> . 2b)⊠ This	s action is non-final.	
3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.			
Disposition of Claims			
4)⊠	Claim(s) <u>1-20</u> is/are pending in the application.		
	4a) Of the above claim(s) is/are withdrawn from consideration.		
5) <u> </u>	Claim(s) is/are allowed.		
	Claim(s) <u>1-20</u> is/are rejected.		
	7) Claim(s) is/are objected to.		
8) Claim(s) are subject to restriction and/or election requirement.			
Application Papers  OND The specification is objected to by the Exeminer			
9)  The specification is objected to by the Examiner.  10)  The drawing(s) filed on is/are: a)  accepted or b)  objected to by the Examiner.			
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).			
11) ☐ The proposed drawing correction filed on is: a) ☐ approved b) ☐ disapproved by the Examiner.			
If approved, corrected drawings are required in reply to this Office action.			
12) The oath or declaration is objected to by the Examiner.			
Priority under 35 U.S.C. §§ 119 and 120			
13) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).			
a) ☐ All b) ☐ Some * c) ☐ None of:			
1.☐ Certified copies of the priority documents have been received.			
	2. Certified copies of the priority documents have been received in Application No.		
<ul> <li>3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).</li> <li>* See the attached detailed Office action for a list of the certified copies not received.</li> </ul>			
14) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).			
a) ☐ The translation of the foreign language provisional application has been received. 15)☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.			
Attachment(s)			
1) Notice of References Cited (PTO-892)  4) Interview Summary (PTO-413) Paper No(s)  2) Notice of Draftsperson's Patent Drawing Review (PTO-948)  5) Notice of Informal Patent Application (PTO-152)  6) Other:			
S. Patent and Trademark Office			

Art Unit: 2643

## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

1. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Muntz et al (5,896,427 hereinafter Muntz) in view of Khasnabish (6,411,679).

Regarding claims 1 and 13. Muntz teaches a system and method for maintaining network synchronization by using time stamps (entire disclosure) comprising:

transmitting a first signal from a first point to a second point of the communication network, wherein the first and second points are remotely located (see figure 3 wherein

Art Unit: 2643

SOURCE CPE (i.e. first point) transmits a first signal to DEST CPE (i.e. second point) of communication network 300);

recording a first time value of the SOURCE CPE using a first clock (col. 1 line 35 – col. 5 line 45, col. 6 lines 20-67);

receiving a second signal at the DESTINATION CPE (col. 1 line 35 – col. 5 line 45, col. 6 lines 20-67, col. 7 line 1 – col. 13 line 17); and

recording a second time value of the receiving using a second clock (columns 1-4, col. 6 lines 45-48, col. 6 line 63 – col. 7 line 19, col. 7 line 20 – col. 13 line 17) wherein the first and second clocks operate from a substantially similar reference (col. 1 line 35 – col. 5 line 45, col. 6 lines 45-48).

Muntz does not explicitly show testing a communication network.

Khasnabish teaches an apparatus and method for call progress timing measurement in IP telephony (Title, abstract) wherein a first device sends a signal to a second device (abstract) and monitoring for a response from the device and calculating an elapsed time between sending the signal and a receipt response (columns 1-2). Khasnabish teaches that both voice and non-voice signals are sent over the network via TESTER 105 figure 1 wherein TESTER is microprocessor based and preferably makes use of a multi-tasking operating system since the TESTER needs to be able to launch, control, and store information about multiple simultaneous telephone test calls (columns 2-4). Khasnabish discloses that TESTER can make calls over PSTN or INTERNET (columns 4-6).

Art Unit: 2643

It would have been obvious for any one of ordinary skill in the art at the time the invention was made to modify the invention as taught by Muntz to use the TESTER as taught by Khasnabish so that call progress through the network may be monitored to determine whether or not the system under test is operating properly as taught by Khasnabish.

Regarding claim 2. Muntz teaches comparing first and second signal as a function of first and second time values (col. 4 line 15 – col. 5 line 67, col. 6 line 20 col. 7 line20).

Regarding claims 3-4. Muntz does not explicitly show testing a communication network.

Khasnabish teaches an apparatus and method for call progress timing measurement in IP telephony (Title, abstract) wherein a first device sends a signal to a second device (abstract) and monitoring for a response from the device and calculating an elapsed time between sending the signal and a receipt response (columns 1-2). Khasnabish teaches that both voice and non-voice signals are sent over the network via TESTER 105 figure 1 wherein TESTER is microprocessor based and preferably makes use of a multi-tasking operating system since the TESTER needs to be able to launch, control, and store information about multiple simultaneous telephone test calls (columns 2-4). Khasnabish discloses that TESTER can make calls over PSTN or INTERNET (columns 4-6).

It would have been obvious for any one of ordinary skill in the art at the time the invention was made to modify the invention as taught by Muntz to use the TESTER as

Art Unit: 2643

taught by Khasnabish so that call progress through the network may be monitored to determine whether or not the system under test is operating properly as taught by Khasnabish.

Regarding claims 5 and 16. Muntz teaches using Stratum clock (col. 3 lines 24-25).

Regarding claims 6 and 14. Muntz teaches further comprising providing the reference signal to the first and second clocks (columns 1-5, col. 6 line 20 – col. 7 line 43).

Regarding claims 7-8 and 17-18. Muntz teaches SOURCE CPE and DESTINATION CPE see figure 3.

Regarding claims 9-10 and 19-20. Muntz teaches source and destination nodes may be located in different countries (col. 3 line 30). Khasnabish also teaches IP telephony.

Regarding claim 11. Muntz teaches that separate clocks may be used (col. 1 line 35 – col. 4 line 14, col. 4 line 15 – col. 5 line 67, col. 6 line 20 col. 7 line20).

Regarding claims 12 and 15. Muntz does not show using a satellite. However, Muntz discloses that the source and destination CPEs may be located in different countries and would only make sense to use well know satellite techniques for system reference signal.

## Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

---(6,091,802) Smith et al is considered pertinent for a telecommunication system tester (see all).

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Barry W. Taylor whose telephone number is (703) 305-4811. The examiner can normally be reached on Monday-Friday from 6:30am to 4pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Curtis Kuntz can be reached on (703) 305-4708. The fax phone number for this Group is (703) 872-9314.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to Technology Center 2600 customer service Office whose telephone number is (703) 306-0377.
